## Adjust the parts

Slightly tighten all bolts and screws so you can still move parts around. Put your actual weapon in the gun lock and butt plate and position your whole assembly at your intended location. Adjust hinge height/angle and butt plate position until your weapon is properly lined up.

Parts of the weapon may interfere with parts of the Mounting Hinge (No. Sc-9302).In this case turn the hinge around 180 degrees.

Warning: If you close the ratchet arm tightly on your firearm, you will have to press or tap the outer rubber surface of the ratchet arm when deploying the firearm. This will release the backup safety inside the gun lock, releasing your weapon.

**Drill and install** 

Drill your holes and install assembly.

Place your weapon in the setup, test and retest your installation by repeatedly inserting and removing the weapon from the assembly. When satisfied, tighten all screws and test again.

Mark screw locations on wall/floor.Check back side of wall for fuel or electric lines.
